Tsunami Zone → Safe Area

IN CASE OF EARTHQUAKE GO TO SAFE AREA

This map is to help you protect yourself from the biggest tsunami likely to hit our area. Evacuation maps are for emergency planning and response and are not intended for any other purposes. They are based on the best currently available data and are subject to change and updates.

YELLOW ZONES ARE BASED ON THE OFFICIAL STATE TSUNAMI HAZARD MAPS FOR EVACUATION PLANNING. PEOPLE OUTSIDE OF THE YELLOW ZONE DO NOT NEED TO EVACUATE.

Natural Warning Signs May Be Noticed After Near or Distant Earthquakes

KNOW THE SIGNS...

- Earthquake shaking
- Ocean suddenly recedes back or surges inland
- Loud roaring sound coming from the ocean

DO NOT WAIT FOR AN ALERT! Natural warning signs mean that a tsunami could be arriving soon. **Official warnings may not arrive on time.**

Find out more information from the Redwood Coast Tsunami Work Group by scanning the QR code.

Official Warnings

OFFICIAL WARNINGS CAN BE EXPECTED FOR TSUNAMIS GENERATED BY EARTHQUAKES FAR AWAY.

- Alerts delivered via phone, television, radio, weather radio, or in-person warnings issued by local authorities
- Tsunami sirens

Evacuation Guidance

- If you notice any natural warning signs or receive official warnings: move inland or to higher ground immediately.
- Follow route guidance on the map. Stay put until local officials say it is safe. **The first wave is not usually the largest!**
- For up-to-date local emergency information, tune your radio to KPOD 97.9 FM or KCRE 94.3 FM.

Tsunami history in Del Norte County

Crescent City has experienced some of the most significant tsunami impacts on the West Coast. The tsunami generated by the 1964 Great Alaskan Earthquake destroyed nearly 30 blocks in Crescent City and killed 11 people, the highest death toll of any tsunami to hit the U.S. West Coast in historical times. **Tsunamis are rare—but they can be deadly. Be prepared.**
